## **DETAILED ACTION**

## Allowable Subject Matter

- 1. Claims 3-12, 17-18, 37-59 are allowed.
- 2. The following is a statement of reasons for allowance: the prior art of record, taken alone or in combination, fails to disclose or render obvious, a method for error detection in a drive mechanism, having a multiphase electric motor and a converter connected upstream thereof, wherein said converter controls voltages of individual phases of said electric motor, and individual phase currents in said individual phases of said electric motor each extend periodically, the method comprising: measuring a phase current of said electric motor; simultaneously varying a voltage; evaluating a measured value of said measured phase current as a function of said voltage that is associated with said measured phase current, wherein said evaluating allows distinguishing between an error in said converter and a disruption of current flow in a phase of said electric motor that corresponds to said measured phase current; and wherein in case of a disruption in a phase of said electric motor, said measured phase current is equal to zero, regardless of a value of said associated voltage, and in case of an error in a converter valve of said converter, said measured phase current is equal to zero only for a portion of said value of said associated voltage, as further recited in claim 1.
- 3. Claims 2-12, 17-18 and 37-59 depending from claim 1 are allowed for the same reason.
